

New investments in the sheet ABS-PBS/PPMA-PS sector

Following significant investments earmarked in 2008 for the sheet sector a new production line was installed with the scope of responding to the requirements of specific sectors, namely sanitary ware and automotive.

Furthermore, the company is currently undertaking an important market study to evaluate the possibility of increasing investment in the sheet sector with the objective of producing new products in order to allow further diversification towards new industrial sectors.

MP3 therefore continues to operate with the objective to further reinforce over the next three years the presence of their products in the European market, thanks to their confidence to be able to satisfy the majority of market requests.

To this end agreements have been signed with five of the leading international agents in the thermoforming industry, further improving presence in the European markets, in particular: Obermann Kunststoffe (www.obermann-kunststoffe.de) for the German market Kugo Repara (www.kugorepara.es) for the Spanish & Portuguese markets, Nortec Cannon (www.nortec-cannon.dk) for the Scandinavian markets, Draeger (www.draeger-a.at) for the Austrian, Czech Republic, Hungarian & Slovakian markets and Almitech (www.almitech.ro) for Romania.
