

New investments in the sheet ABS-PBS/PPMA-PS sector

Following significant investments reported in 2009 for the sheet sector a new production line was installed with the aim of responding to the requirements of specific sectors, namely sanitary ware and automotive.

Furthermore, the company is currently undertaking an important market study to evaluate the possibility of increasing investments in the sheet's sector with the objective of turning out new products in order to allow further diversification towards new industrial sectors.

MP3 therefore continues to operate with the aim to further reinforce over the next three years the presence of their products in the European market, thanks to their confidence to be able to satisfy most of market requests.

To this end some agreements have been signed with six of the leading international agents in the thermoforming industry, further improving presence in the European markets, in particular: Kugo Repara (www.kugorepara.es) for the Spanish & Portuguese markets, Nortec Cannon (www.nortec-cannon.dk) for the Scandinavian markets, Draeger (www.draeger-a.at) for the Austrian, Czech Republic, Hungarian, Slovakian markets, Almitech (www.almitech.ro) for Romania and Avak for Egypt.
